Emigration.

It appears from returns issued by the Board of Trade that 34,267 emigrants embarked during last quarter, from the various ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. The weather in January was generally wet and dull, with very little sunshine; the mean temperature was above the average until the 12th, the remainder of the month being cold. The weather continued cold until February 8th, after which the temperature rose and continued above the average until the end of the month. The weather in March was changeable, with frequent rain, the temperature being generally above the average, especially from the 19th to the 26th, when the mean daily excess was 9°·6. DEATHS IN PUBLIC INSTITUTIONS.—The total deaths registered in England and Wales include 19,210, or 13·4 per cent., which occurred in workhouses, hospitals, and lunatic asylums, the mean proportion of deaths in these classes of institutions in the ten preceding first quarters having been 12·1 per cent. In the thirty-three great towns the deaths in public institutions formed 21·6 per cent. of the total deaths, the percentages in the several towns ranging from 6·0 in Gateshead, 6·2 in Swansea, 8·9 in Burnley, and 9·7 in Bolton, to 20·2 in Croydon, 22·4 in Manchester, 24·2 in Liverpool, and 30·0 in London.

LONDON.—The figures in Tables V. and VI. include deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within registration London. The deaths thus computed were equal to an annual rate of 18·4 per 1000 (Table VI.). If, however, all deaths of non-Londoners which occurred in hospitals or other public institutions in London are excluded, the rate is reduced to 18·0 per 1000. Table VIII. shows the death-rate of London after such correction has been applied; and, since the registered mortality in many districts of London is seriously affected by the hospitals and other public institutions, the death-rates in each of the forty-three sanitary areas have been added, after distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged.

EDINBURGH, GLASGOW, AND DUBLIN.—The annual death-rate per 1000 living last quarter was 22·4 in Edinburgh, 26·8 in Glasgow, and 40·1 in Dublin, against 18·4 in London. *Measles* and *whooping-cough* were specially fatal in Glasgow and in Dublin, giving an aggregate rate of 3·5 per 1000 in the former and of 7·0 per 1000 in the latter city.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General is favoured by various local authorities abroad, it appears that the deaths last quarter in thirty Colonial and Foreign cities, with an aggregate population estimated at about twenty and a quarter millions, corresponded to an annual rate of 25·8 per 1000 persons living.

In twenty-two European cities the mean rate was 22·2 per 1000, against 19·2 in the thirty-three great English towns. In Paris the rate was 20·4, in Berlin it was 17·4, in Vienna it was 23·5, and in New York it was 20·7, against 18·4 in London. Among the other European and American cities the death-rates ranged from 16·3 in the Hague, 16·8 in Hamburg, and 17·6 in Brussels, to 30·6 in Trieste, 31·0 in St. Petersburg, and 37·0 in Moscow. Among the Indian and Egyptian cities the rate reached 46·6 in Cairo and 93·5 in Bombay. *Small-pox* caused 30 deaths in Calcutta, 27 in Madras, 25 in Bombay, 24 in St. Petersburg, 19 in Cairo, and 16 in Moscow. In proportion to population the mortality from *measles* was highest in Bombay, Madras, St. Petersburg, Moscow, Prague, and Trieste; and from *scarlet fever* in St. Petersburg and Moscow. *Diphtheria* was excessively fatal in St. Petersburg, Moscow, Vienna, Trieste, New York, Brooklyn, and Philadelphia; and "*fever*" in St. Petersburg and in the Indian cities, the number of deaths under this heading in Bombay reaching 11,242 (of which 7247 were due to bubonic fever), which is equal to a death-rate of 54·9 per 1000. The mortality from *diarrheal diseases* was highest in the Indian and Egyptian cities, and in St. Petersburg and Moscow.

The Registration Districts, 634 in number, are collections of contiguous Parishes or Places, combined for purpose connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties. The numerical arrangement 1a to 631 was adopted on 1st July 1891.

^a These areas, revised by the Ordnance Survey Department, are derived from those published in the Census Report 1891. They do not include space occupied by foreshore or tidal water of rivers and creeks. Numerous changes in the boundaries of sub-districts have taken place since the Census of 1891; in the majority of these cases the new areas have yet been ascertained.

The Registration Sub-districts (2092 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district falls within its limits a Workhouse belonging to the District or Union; *v* indicates Workhouse Establishment giving inmates from other Districts than the one in which it stands; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

See page 6, note ^a.

^c See page 2, note ^d.

For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to weeks ending 3rd April 1897.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1897 was estimated at 39,826,806 persons; that of England and Wales at 31,055,355, of Scotland at 4,218,279, and of Ireland at 4,553,172.

In the United Kingdom 287,473 *births* and 167,998 *deaths* were registered in the three months ending 30th June 1897. The natural increase of population was, therefore, 119,475. The number of persons married in the quarter ending 31st March 1897 was 119,500.

The birth-rate in the United Kingdom in the *second* quarter of 1897 was 29·0, and the death-rate 16·9, per 1000. The marriage-rate in the *first* quarter of 1897 was 12·2 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

It appears from returns issued by the Board of Trade that 57,128 emigrants embarked during last quarter, from the various ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 593 emigrants whose nationality was not ascertained, the emigrants who were natives of the United Kingdom numbered 41,157, of whom 21,063 were English, 3731 Scotch, and 16,363 Irish, whilst 15,971 others were of foreign origin. The proportions of emigrants belonging to the several portions of the United Kingdom, per million of the respective estimated populations, were 678 belonging to England, 884 belonging to Scotland, and 3,594 belonging to Ireland. Compared with the averages in the three preceding second quarters, the proportion of English emigrants showed a decrease of 22·8 per cent., that of Scotch emigrants a decrease of 11·8 per cent., and that of Irish emigrants a decrease of 21·3 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,089 registration sub-districts of England and Wales during the quarter ending 30th June 1897; and the MARRIAGES in 15,238 churches or chapels, in 11,792 registered places of worship unconnected with the Established Church, and in 634 Superintendent Registrars' Offices, during the three months ending 31st March 1897.

Marriages.

During the *first* quarter of 1897 the marriages of 89,236 persons were registered, being equal to an annual rate of 11·7 persons married per 1000 of the estimated population; this had also been the average rate in the corresponding quarters of the ten years 1887-96.

Among registration counties the lowest marriage-rates were 7·3 in Middlesex, 7·5 in Cambridgeshire and in Westmorland, and 8·0 in Buckinghamshire; and the highest, 13·6 in Lancashire, 13·7 in Northumberland, 14·4 in the East Riding of Yorkshire, and 14·5 in Durham.

Births.

The births registered in the *second* quarter of 1897 numbered 226,345, and were in the proportion of 29·2 annually per 1000 living, the mean rate in the ten preceding second quarters having been 31·4. In registration counties the lowest birth-rates per 1000 during the quarter were 21·4 in Rutlandshire, 22·0 in Sussex and in Westmorland, 23·4 in Surrey, and 23·5 in Huntingdonshire; and the highest 33·1 in Northumberland, 33·4 in South Wales, 34·0 in Monmouthshire, 34·2 in Staffordshire, and 35·0 in Durham.

In the thirty-three great towns the birth-rate averaged 30·0 per 1000, ranging from 22·2 in Halifax, 23·0 in Brighton, 23·3 in Croydon, and 24·4 in Huddersfield, to 33·9 in Salford, 34·0 in Preston, 34·2 in Liverpool, and 35·9 in Gateshead. Natural Increase of Population.

The natural increase of the population of England and Wales during the quarter, by the excess of births over deaths, was 100,267, against 102,304, 102,877, and 106,263 in the second quarters of 1894, 1895, and 1896, respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 23s. 7d., 30s. 5d., and 29s. 7d. respectively in the preceding three quarters, further declined last quarter to 27s. 6d. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 3½d.; of prime beef, 6½d.; of inferior mutton, 5½d.; of prime mutton, 8½d. Compared with the average prices in the preceding three months, the mean prices of prime beef and of inferior mutton showed an increase of ½d., and the price of prime mutton a decrease of ½d., while the price of inferior beef remained unchanged. The average price in the London Market of sea-borne coal, put in barge from the collier in the Thames, was 14s. 3d. per ton, against 14s. 1d. and 13s. 6d. per ton in the second quarters of 1895 and 1896 respectively. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced to 3l. on 4th February last, was further reduced to 2½l. on 8th April, and to 2l. on 13th May. The average minimum rate during the quarter was 2l. 5s. 5d. per cent.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 706,483, of whom 194,514 received in-door, and 511,969 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·7 per 1000, against 23·8 and 23·1 per 1000 respectively in the second quarters of 1895 and 1896.

Meteorology.

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations will be found, with accompanying Tables, on pages 73–80.

The mean reading of the barometer was 29·777 inches, being ·009 inch below the average reading in the second quarters of 56 years; the mean reading was ·065 inch below the average in April, ·004 inch above in May, and ·035 inch above in June. The mean temperature of the air was 53°·1, or 0°·7 above the average in the first quarters of 126 years; it was 0°·2 below the average in April, 0°·3 below in May, but showed an excess of 2°·7 in June. In April the weather was changeable, with frequent rain towards the middle and at the end of the month; in May it was mostly dull, with very little sunshine, and with temperature below the average during the greater part of the month, especially on the 11th, 12th, and 13th; in June it was generally warm, fine, and bright, the temperature being above its average except during two periods of four and five days respectively. At 28 other stations of observation the mean temperature of the air during the quarter ranged from 47°·6 at Halifax, 49°·2 at Wolverhampton, and 49°·3 at Llangammarch Wells, to 52°·6 at Whitechurch, 52°·7 in Guernsey, and 53°·3 at Camden Square.

The amount of rain measured during the quarter at the Royal Observatory was 4·80 inches, which is 0·82 inch below the average in the second quarters of 82 years. The amount was below the average in each month of the quarter, the deficiency in April being 0·06 inch, in May 0·75 inch, and in June 0·01 inch. At 28 other stations of observation the rainfall during the quarter ranged from 4·52 inches at Camden Square, 4·63 inches at Royston, and 4·70 inches at Lowestoft, to 8·82 inches at Llangammarch Wells, 10·05 inches in Guernsey, and 11·39 inches at Stonyhurst.

The duration of bright sunshine recorded in the quarter at the Royal Observatory was 574·6 hours, being 41·3 per cent. of the total hours during which the sun was above the horizon, against a mean proportion of 34·3 per cent. in the nineteen preceding second quarters. The duration of bright sunshine was above the average in each month of the quarter, the excess being equal to 15 per cent. in April, 43 per cent in May, and 2 per cent in June.

Deaths.

The deaths registered last quarter numbered 126,078, and were in the proportion of 16·3 deaths annually per 1000 persons living, the average rate in the ten preceding second quarters having been 18·1. In registration counties the death-rates ranged from 11·1 in Middlesex, 12·5 in Surrey, 12·6 in Sussex, and 12·9 in Rutlandshire, to 18·0 in Warwickshire, in Cheshire, and in South Wales, 19·6 in Lancashire, and 21·4 in North Wales.

The 126,078 deaths registered in England and Wales included 66,078 of males and 60,000 of females, the death-rate among males being 17·6, and that among females 15·0, per 1000 of the estimated populations of the respective sexes. Compared with the averages in the ten preceding second quarters the death-rate of males and that of females each showed a decrease of 1·8 per 1000 living. Out of equal numbers living, the deaths of males to those of females were as 117 to 100, against a mean proportion of 116 to 100 in the second quarters of the ten preceding years.

URBAN AND RURAL MORTALITY.—In those parts of England and Wales that are mainly urban* in character, with a population estimated at upwards of twenty-one millions in the middle of 1897, the death-rate last quarter was 16·6 per 1000 living; whilst in the remaining and chiefly rural areas, with a population of nearly ten millions, the rate was 15·6 per 1000. These rates were respectively 2·1 and 1·3 below the mean rates in the ten preceding second quarters. Out of equal numbers living the deaths last quarter in the urban areas were to those in the rural areas as 106 to 100, the mean proportion in the ten preceding second quarters having been as 111 to 100.

In the *Thirty-three great towns*, of which the aggregate population in the middle of 1897 is estimated at nearly eleven millions, the death-rate was 16·9 per 1000 living, or 0·6 in excess of the death-rate in the whole country. The rates in the several towns ranged from 11·7 in Croydon, 13·0 in Brighton, 13·3 in West Ham, and 13·4 in Swansea, to 20·2 in Preston, 21·8 in Liverpool, 22·7 in Manchester; 23·4 in Bolton, and 25·5 in Salford.

The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 124 per 1000, which is 4 per 1000 below the proportion in the ten preceding second quarters. In registration counties the lowest proportions per 1000 births were 70 in Hertfordshire, 74 in Huntingdonshire, 83 in Surrey, and 91 in Middlesex; and the highest, 141 in North Wales, 145 in South Wales, 146 in Cornwall, and 152 in Lancashire.

In the thirty-three great towns as a whole the infant mortality was equal to 128 per 1000 births, being higher than the proportion in England and Wales by 4 per 1000; in the several towns the lowest proportions were 88 per 1000 births in Croydon, 100 in Portsmouth, 105 in Swansea, and 107 in Huddersfield; whilst the highest were 167 in Preston, 168 in Burnley, 174 in Bolton, and 194 in Salford. In the sixty-seven other large towns the infant mortality averaged 131 per 1000 births, ranging from 38 in Gloucester, 64 in Hornsey, 65 in Walthamstow, and 81 in Wakefield, to 176 in Barnsley, 183 in Accrington, 186 in Merthyr Tydfil, and 200 in Longton. Excluding these 100 towns, the infant mortality in the remainder of England and Wales was in the proportion of 120 per 1000 births.

The mortality in England and Wales among persons aged between one year and 60 years was at the annual rate of 8·6 per 1000 of the estimated population at this group of ages, being 1·3 below the mean rate in the ten preceding second quarters. In the thirty-three great towns the mean mortality at this age-group was 9·8 per 1000 living, ranging from 6·3 in Croydon, 6·4 in Norwich, and 7·1 in Derby, to 13·3 in Liverpool, 13·9 in Bolton, 14·0 in Manchester, and 16·5 in Salford. In the sixty-seven other large towns the rate averaged 8·7 per 1000, and in the remainder of England and Wales, after excluding these 100 towns, it averaged 7·8.

Among persons aged 60 years and upwards the mortality in England and Wales was at the annual rate of 66·4 per 1000 of the estimated population at this group of ages, the average rate in the ten preceding second quarters having been 69·7. In the thirty-three great towns the rate was 69·2 per 1000, ranging from 45·1 in Brighton, 55·2 in Croydon, 55·4 in Plymouth, and 56·3 in Wolverhampton,

* For definition of the terms "urban" and "rural," see Table III. on p. xi.

to 90·3 in Halifax, 91·8 in Blackburn, 92·3 in Manchester, 97·3 in Sheffield, and 100·8 in Bolton. In the sixty-seven other large towns the average rate at this age-group was 64·4 per 1000, and in the remainder of the country it was 65·4.

Compared with the mean rates in the ten preceding second quarters the mortality of infants under one year of age in England and Wales showed a decrease of 3·1 per cent., that of persons between one year and 60 years of age a decrease of 13·1 per cent., and that of persons aged 60 years and upwards a decrease of 4·7 per cent.

ZYMOTIC DISEASES.—The 126,078 deaths from all causes, which were registered last quarter, included—

		measles,
		diphtheria,
		diarrhœa,
		scarlet fever,

Thus, to the above-mentioned zymotic diseases in the aggregate, 10,414 deaths were referred, being in the proportion of 1·36 annually per 1000 of the population, or 0·38 lower than the average proportion in the corresponding quarters of the preceding ten years. In proportion to population, the mortality from each of these diseases except diphtheria was below its decennial average. In the thirty-three great towns the aggregate mortality from the above-named zymotic diseases was equal to an annual rate of 1·70 per 1000 of the population, and in the sixty-seven other large towns to a rate of 1·44 per 1000. In the remainder of England and Wales, outside the 100 chief towns, the rate was 1·08 per 1000.

Whooping-cough was the registered cause of death in 3065 cases, corresponding to a death-rate of 0·40 annually per 1000 of the population, or 0·05 less than the decennial average for the second quarter in the preceding ten years. No death was referred to whooping-cough in Huntingdonshire, and the rate was as low as 0·10 in Shropshire, 0·11 in Herefordshire, and 0·12 in Cambridgeshire and in Westmorland; the highest rates were 0·61 in Oxfordshire, 0·62 in Nottinghamshire, 0·76 in the North Riding of Yorkshire, and 0·77 in Cheshire. In the thirty-three great towns the rate averaged 0·45 per 1000; the lowest rates were 0·08 in Swansea, 0·12 in Leeds, 0·16 in Bradford, and 0·17 in Halifax; and the highest, 0·77 in Oldham, 0·79 in Blackburn, 0·96 in Manchester, and 1·19 in Plymouth. In the sixty-seven other large towns whooping-cough mortality averaged 0·43 per 1000, or 0·02 less than in the thirty-three great towns. Among these sixty-seven towns the disease was especially fatal in Southampton, Northampton, Cheltenham, Worcester, Aston Manor, St. Helens, Ashton-under-Lyne, Scarborough, and Middlesbrough. In the remainder of England and Wales the rate was 0·35 per 1000. Among registration districts and sub-districts outside the 100 chief towns whooping-cough showed excessive fatality in Rye, Alresford, Charlbury, Blofield, Leek, Sutton-in-Ashfield, Arnold, Runcorn, Over, and Roose.

The deaths from *measles* numbered 2905, and corresponded to an annual rate of 0·38 per 1000 of the population, a reduction of 0·15 from the decennial average rate for the second quarter of the year. No death was referred to measles last quarter in Bedfordshire, in Gloucestershire, in Herefordshire, or in Rutlandshire; but the rate from this disease ranged upwards in the other counties to 0·66 in Warwickshire, 0·67 in Cornwall, 0·90 in South Wales, 1·13 in Lancashire, and 1·31 in Monmouthshire. In the thirty-three great towns the measles rate averaged 0·55 per 1000. No death was attributed to this disease either in Brighton, in Swansea, or in Norwich; in the other great towns the highest rates were 1·53 in Preston, 1·89 in Burnley, 4·06 in Bolton, and 4·61 in Salford. In the sixty-seven other large towns the rate averaged 0·41 per 1000, and among these the highest death-rates from measles were recorded in Exeter, Aston Manor, St. Helens, Wigan,

Accrington, Rotherham, Ystradyfodwg, Merthyr Tydfil, and Aberdare. In the remainder of England and Wales the measles death-rate was equal to 0·25 per 1000. Among registration districts and sub-districts outside the 100 chief towns in which measles was specially fatal were Stilton, Blandford, St. Clement, Redruth, Glastonbury, Leigh, Bacup, Blackpool, Fleetwood, Penrith, Aberystwith, and Pontypool.

Diphtheria was the registered cause of death in 1437 instances during the quarter, and accounted for a mortality equal to 0·19 per 1000 living, or 0·01 in excess of the average rate in the previous ten corresponding quarters. No death was referred to diphtheria last quarter in Huntingdonshire or in Rutlandshire; in the other counties the rates from this disease ranged upwards to 0·27 in South Wales, 0·28 in Middlesex, 0·29 in Kent, and 0·34 in North Wales. In the thirty-three great towns the diphtheria rate averaged 0·24 per 1000. No death was referred to this disease in Croydon or in Swansea, and only one each in Brighton, Derby, Blackburn, Preston, and Gateshead; in the other towns the rates ranged upwards to 0·37 in Wolverhampton, 0·38 in London and in Cardiff, and 0·53 in Burnley. In the sixty-seven other large towns the mortality from diphtheria averaged 0·18, and amongst these showed the greatest excess in Eastbourne, Willesden, Gloucester, Longton, West Bromwich, Macclesfield, Ystradyfodwg, Merthyr Tydfil, and Aberdare. In the remainder of England and Wales the rate was 0·15 per 1000. Among registration districts and sub-districts outside the chief towns diphtheria was especially fatal in Rochester and Chatham, Maidstone, Smallburgh, Lyme, St. Mary Shrewsbury, and Holywell.

Diarrhœa caused 1418 deaths in the course of last quarter, which were equal to an annual rate of 0·18 per 1000, or 0·08 below the average mortality for the second quarter in the previous ten years. The death-rate from this disease was equal to 0·28 in Warwickshire, 0·30 in Lancashire and in the East Riding of Yorkshire, and 0·32 in Staffordshire. Among the thirty-three great towns the diarrhœa rate averaged 0·21 per 1000, the highest rates being 0·36 in Brighton, 0·38 in Liverpool, 0·41 in Salford and in Oldham, and 0·42 in Preston. In the sixty-seven other large towns the rate averaged 0·19, and among these diarrhœa was most fatal in Dudley, Worcester, Bootle, Barnsley, and York. In the rest of England and Wales the diarrhœa death-rate was equal to 0·16 per 1000.

To *scarlet fever* 913 deaths were ascribed last quarter, corresponding to an annual mortality of 0·12 per 1000, or 0·05 below the average rate in the second quarters of the previous ten years. No death from scarlet fever was recorded in Huntingdonshire, Rutlandshire, or Westmorland; the highest rates were 0·17 in Staffordshire and in Lancashire, 0·18 in Cheshire, 0·19 in Derbyshire, and 0·27 in Leicestershire. In the thirty-three great towns the scarlet fever rate averaged 0·15 per 1000; no death from this disease was registered last quarter in Preston, and only one each in Portsmouth, Plymouth, Norwich, Burnley, and Gateshead. The highest scarlet fever rates were 0·25 in Liverpool and in Hull, 0·32 in Huddersfield, and 0·49 in Leicester. In the sixty-seven other large towns the rate averaged 0·12 per 1000, and among these was excessive in Northampton, Walthamstow, Walsall, St. Helens, Keighley, Barnsley, and Darlington. In the remainder of England and Wales the rate was 0·10 per 1000. In the registration districts and sub-districts outside the chief towns scarlet fever showed excessive fatality in Frimley, Sedgley, Northwich, Upholland, Liversedge, and Normanton.

To "*fever*" 673 deaths were referred last quarter, giving an annual death-rate of 0·09 per 1000, which is lower by 0·04 than the average rate for the corresponding quarter in the preceding ten years. No death from fever was registered in Buckinghamshire, in Huntingdonshire, in Herefordshire, in Rutlandshire, or in Westmorland; the highest rates were 0·13 in Hampshire, in Lancashire, and in the North Riding of Yorkshire, 0·14 in Nottinghamshire, and 0·15 in Leicestershire. In the thirty-three great towns the rate averaged 0·10 per 1000; no death from "fever" was registered in Huddersfield, and only one each in Plymouth, Wolverhampton, Norwich, Derby, and Bolton; the highest rates were 0·20 in Brighton, 0·24 in Blackburn, 0·29 in Portsmouth, and 0·32 in Salford. In the sixty-seven

other large towns the rate averaged 0·11 per 1000, and among these towns the disease showed the highest proportional fatality in Exeter, Longton, Stockport, Ashton-under-Lyne, Darwen, and Keighley. In the remainder of England and Wales the rate was 0·07 per 1000. Among registration districts and sub-districts outside the chief towns the mortality from fever was excessive in Tickhill and Standish.

Only 3 deaths were referred to *small-pox* last quarter; 2 of these were of persons belonging to London; the other death occurred in Rotherham.

WATERING-PLACES AND SUMMER RESORTS.—The deaths registered last quarter from all causes, and from each of the more important zymotic diseases, in those urban districts which are most nearly coterminous with our chief watering-places, are shown in Table VIII. For purposes of comparison the populations at the census of 1891 are also given.

VIOLENT DEATHS.—The deaths in England and Wales which were referred to different forms of violence, whether accidental or otherwise, numbered 4820 last quarter, and were equal to an annual rate of 0·62 per 1000 of the population, which had also been the average rate in the ten preceding second quarters. The rates in the several counties last quarter ranged from 0·33 in Cornwall, 0·37 in Rutlandshire, and 0·38 in Cambridgeshire, to 0·71 in South Wales, 0·74 in Staffordshire, 0·76 in Cumberland, 0·80 in the East Riding of Yorkshire, and 0·83 in Shropshire. In the thirty-three great towns the mean rate was 0·72 per 1000 living, the rates in the several towns ranging from 0·28 in Huddersfield, 0·33 in Plymouth, 0·34 in Burnley, and 0·36 in Oldham, to 0·81 in London, 0·84 in Nottingham, 0·96 in Hull, and 1·13 in Liverpool.

CERTIFICATION OF CAUSES OF DEATH.—Of the 126,078 deaths registered in England and Wales last quarter, the causes of 115,206, or 91·4 per cent., were certified by registered medical practitioners, and the causes of 8259, or 6·5 per cent., by coroners after inquest; whilst the causes of the remaining 2613, or 2·1 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding second quarters having been 2·6 per cent. In registration counties the proportion of uncertified deaths ranged from 0·5 per cent. in Wiltshire, 1·0 in Monmouthshire, and 1·2 in Hampshire and in the East Riding of Yorkshire, to 3·6 in Berkshire, 4·0 in North Wales, 4·7 in Westmorland, and 5·9 in Huntingdonshire. In the thirty-three great towns the mean proportion of uncertified deaths was 1·3 per cent.; but while no uncertified death was registered in Croydon or in Derby, the proportions rose to 3·1 in West Ham, 3·2 in Liverpool, 3·3 in Birmingham and in Sheffield, 3·7 in Halifax, and 4·0 in Preston.

INQUESTS.—Inquests were held in England and Wales concerning 8259, or 6·5 per cent., of the total deaths, the mean proportion in the ten preceding first

quarters having been 5·8 per cent. In the thirty-three great towns the mean proportion of inquest cases was 8·2 per cent., ranging from 2·9 in Burnley and in Huddersfield, 3·9 in Sheffield, and 4·2 in Blackburn, to 9·3 in Croydon and in Hull, 10·1 in Bristol, 10·3 in Derby, and 10·5 in London.

DEATHS IN PUBLIC INSTITUTIONS.—The total deaths registered in England and Wales include 17,826, or 14·1 per cent., which occurred in workhouses, hospitals, and lunatic asylums, the mean proportion of deaths in these classes of institutions in the ten preceding second quarters having been 12·3 per cent. In the thirty-three great towns the deaths in public institutions formed 22·6 per cent. of the total deaths, the percentages in the several towns ranging from 6·3 in Swansea, 7·9 in Preston, and 8·1 in Burnley, to 21·1 in Manchester, 21·6 in Bristol, 23·5 in Liverpool, 24·7 in Brighton, and 32·6 in London.

LONDON.—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London occurring in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within registration London. The deaths thus computed were equal to an annual rate of 15·5 per 1000 (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London are excluded, the rate is reduced to 15·1 per 1000. Table IX. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many districts of London is seriously affected by the hospitals and other public institutions, the death-rates in each of the forty-three sanitary areas have been added, after distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged.

EDINBURGH, GLASGOW, AND DUBLIN.—The annual death-rate per 1000 living last quarter was 25·0 in Edinburgh, 21·0 in Glasgow, and 27·3 in Dublin, against 15·5 in London.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in thirty Colonial and Foreign cities, with an aggregate population estimated at about twenty and a half millions, corresponded to an annual rate of 22·8 per 1000 persons living.

In twenty-two European cities the mean rate was 21·6 per 1000, against 16·9 in the thirty-three great English towns. In Paris the rate was 19·1, in Berlin it was 17·0, in Vienna it was 23·0, and in New York it was 19·3, against 15·5 in London. Among the other European and American cities the death-rates ranged from 13·7 in the Hague, 15·6 in Brussels, and 15·8 in Christiania, to 26·7 in Prague, 32·3 in St. Petersburg, and 42·9 in Moscow. Among the Indian and Egyptian cities the rate reached 37·5 in Bombay, 49·4 in Cairo, and 50·0 in Alexandria. *Small-pox* caused 50 deaths in Cairo, 33 in Alexandria, 37 in Calcutta, 30 in Madras, 24 in Bombay, 23 in St. Petersburg, and 19 in New York. In proportion to population the mortality from *measles* was highest in Paris, St. Petersburg, Moscow, Vienna, Alexandria, and Madras; and from *scarlet fever* in St. Petersburg, Moscow, New York, and Philadelphia. *Diphtheria* was excessively fatal in the Russian and American cities, and in Vienna; and “fever” in the Indian cities and in Cairo. The mortality from *diarrhoeal diseases* was highest in the Indian, Egyptian, and Russian cities, and in Breslau and Munich.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties. The number arrangement 12 to 631 was adopted on 1st July 1891.

* These areas, revised by the Ordnance Survey Department, are derived from those published in the Census Report 1891. They do not include space occupied by foreshore or tidal water of rivers and creeks. Numerous changes in boundaries of sub-districts have taken place since the Census of 1891 in the majority of these cases the new areas have yet been ascertained.

^a The Registration Sub-districts (2089 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates Workhouse Establishment receiving inmates from other Districts than the one in which it stands; *H* indicates Hospital or Infirmary; and *L* Lunatic asylum.

^b See page 6, note ^a.

^c See page 2, note ^d.

^d For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 5 weeks ending 3rd July 1897.

METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING JUNE 30TH, 1897.

| *By* JAMES GLAISHER, Esq., F.R.S., &c.

The weather in April was changeable, with frequent rain towards the middle and at the end of the month. The mean high day temperature of the air was $2^{\circ}\cdot 7$ below the average, and the mean low night temperature was of the same value as the average. The mean daily temperature of the air was below its average from the 1st to the 11th, and from the 19th to the 25th, and generally above on all other days. The atmospheric pressure was generally below its average from the 1st to the 7th, being $0\cdot 80$ inch below on the 1st; above its average from the 8th to the 11th; and generally below from the 12th to the 30th. The fall of rain was a little below its average at some stations, and above at others.

The weather in May was for the most part dull, with very little sunshine. The mean high day temperature of the air was $1^{\circ}\cdot 3$, and the mean low night temperature $1^{\circ}\cdot 0$ below their averages. The mean daily temperature of the air was below its average from the 4th to the 14th, and from the 22nd to the 29th, being as much as $8^{\circ}\cdot 3$, $8^{\circ}\cdot 9$, and $9^{\circ}\cdot 6$ below on the 11th, 12th, and 13th respectively; and above its average on the remaining days. The atmospheric pressure was above its average from the 4th to the 21st, being $0\cdot 51$ inch in excess on the 15th, and generally below on all other days, particularly so on the 27th and 28th, being as much as $0\cdot 56$ inch below on both days. The fall of rain was somewhat below its average at most stations.

The weather in June was generally warm, fine, and bright. The mean high day temperature of the air was $0^{\circ}\cdot 1$, and the mean low night temperature $2^{\circ}\cdot 4$ above their averages. The mean daily temperature of the air was below its average from the 7th to the 10th, and from the 16th to the 20th, and generally above on all other days, being particularly so on the 12th, 13th, 23rd, and 24th, when it was as much as $10^{\circ}\cdot 0$, $12^{\circ}\cdot 4$, $10^{\circ}\cdot 5$, and $11^{\circ}\cdot 2$ respectively above its average. The atmospheric pressure was generally above its average from the 1st to the 15th, and from the 21st to the 26th, and generally below on all other days. The fall of rain was above its average at most stations. A thunderstorm occurred during the afternoon of June 24th, accompanied in many places by a heavy hailstorm and gale of wind. The low lying parts of Beckenham and Penge were flooded and much glass broken by the hail; at Marlow windows were smashed, trees blown down, two pinnacles of the church steeple were blown off, and many of the church windows blown in, the fruit crops were also much damaged. The storm was most severely felt in Essex, extending from Epping in the west of the county, to Colchester in the east. Crops of wheat, barley, and oats have in many cases been almost completely swept off the farms; peas, beans, cabbages, and other vegetables reduced to a pulp; whole crops of apples, pears, and other outside fruits have been destroyed; much glass was broken, and cattle and poultry injured by the heavy hail.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1897 was estimated at 39,826,806 persons; that of England and Wales at 31,055,355, of Scotland at 4,218,279, and of Ireland at 4,553,172.

In the United Kingdom 291,377 *births* and 174,546 *deaths* were registered in the three months ending 30th September 1897. The natural increase of population was, therefore, 116,831. The number of persons married in the quarter ending 30th June 1897 was 163,344.

The birth-rate in the United Kingdom in the *third* quarter of 1897 was 29·0, and the death-rate 17·4, per 1000. The marriage-rate in the *second* quarter of 1897 was 16·5 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

It appears from returns issued by the Board of Trade that 76,264 emigrants embarked during last quarter, from the various ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 1044 emigrants whose nationality was not ascertained, the emigrants who were natives of the United Kingdom numbered 52,478, of whom 34,950 were English, 6737 Scotch, and 10,791 Irish, whilst 23,786 others were of foreign origin. The proportions of emigrants belonging to the several portions of the United Kingdom, per million of the respective estimated populations, were 1125 belonging to England, 1597 belonging to Scotland, and 2370 belonging to Ireland. Compared with the averages in the three preceding third quarters, the proportion of English emigrants showed a decrease of 6·9 per cent., that of Scotch emigrants a decrease of 2·2 per cent., and that of Irish emigrants a decrease of 24·1 per cent.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2087 registration sub-districts of England and Wales during the quarter ending 30th September 1897; and the MARRIAGES in 15,248 churches or chapels, in 11,859 registered places of worship unconnected with the Established Church, and in 635 Superintendent Registrars' Offices, during the three months ending 30th June 1897.

During the *second* quarter of 1897 the marriages of 137,490 persons were registered, being equal to an annual rate of 17·8 persons married per 1000 of the estimated population; this was 2·2 above the average rate in the corresponding quarters of the ten years 1887-96, and exceeded the rate in the second quarter of any year since 1874.

Among registration counties the lowest marriage-rates were 11·9 in Rutlandshire, 12·1 in Cornwall, and 13·0 in Suffolk and in Norfolk; the highest rates were 20·0 in Staffordshire, 20·3 in Northumberland, 21·2 in Lincolnshire, and 22·5 in Warwickshire.

Births.

The births registered in the *third* quarter of 1897 numbered 233,090, and were in the proportion of 29·8 annually per 1000 living, the mean rate in the ten preceding third quarters having been 30·4. In registration counties the lowest birth-rates per 1000 during the quarter were 22·1 in Rutlandshire, 22·8 in Westmorland, 23·2 in Sussex, 23·7 in Bedfordshire, and 24·2 in Dorsetshire; and the highest, 33·0 in Northumberland, 33·2 in South Wales, 34·1 in Staffordshire, 33·7 in Monmouthshire, and 35·5 in Durham.

In the thirty-three great towns the birth-rate averaged 31·1 per 1000, ranging from 23·6 in Huddersfield, 23·8 in Halifax, 24·9 in Bradford, and 25·1 in Croydon, to 34·6 in Wolverhampton, 34·9 in Salford, in Sheffield, in Hull, and in Gateshead, 35·8 in Liverpool, and 37·0 in Sunderland.

Prices and Pauperism.

The average price of wheat per quarter, which had been 30s. 5d., 29s. 7d., and 27s. 6d. respectively in the preceding three quarters, rose again last quarter to 30s. 4d. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 3½d.; of prime beef, 6¾d.; of inferior mutton, 5¾d.; of prime mutton, 8¾d. Compared with the average prices in the preceding three months, the mean price of inferior beef and of inferior mutton showed a decline of ½d. and ¾d. respectively, while that of prime beef and of prime mutton remained unchanged. The average price in the London Market of sea-borne coal, put in barge from the collier in the Thames, was 15s. 0d. per ton, against 14s. 0d. and 13s. 1d. per ton in the third quarters of 1895 and 1896 respectively. The mean price of 2½l. per cent. Consols was 112l. 5s. 10d., having been 112l. 14s. 8d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced to 2l. on 13th May last, was raised to 2½l. on 23rd September. The average minimum rate during the quarter was 2l. 5s. 10d. per cent.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 697,272, of whom 190,185 received in-door, and 507,087 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·5 per 1000, against 23·2 and 22·7 per 1000 respectively in the third quarters of 1895 and 1896.

Meteorology.

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations will be found, with accompanying Tables, on pages 72-79.

The mean reading of the barometer was 29·779 inches, being ·013 inch below the average reading in the third quarters of 56 years; the mean reading was ·053 inch above the average in July, ·111 inch below in August, and ·018 inch above in September. The mean temperature of the air was 60°·9, or 1°·1 above the average in the third quarters of 126 years; it was 2°·8 above the average in July, and 2°·0 above in August, but was 1·4 below the average in September. In the early part of the quarter the temperature was below the average, but from 9th July to 11th August the weather was fine and warm; from the latter date until 22nd September the temperature was again below the average, the weather becoming dull and cool, with very little sunshine, in September. The last week of the quarter was generally warmer than the average: a thunderstorm, accompanied by heavy rain, occurred on 29th September, and was specially severe in and around London. At 26 other stations of observation the mean temperature of the air during the quarter ranged from 55°·7 at Halifax, 55°·9 at Llangammarch Wells, and 56°·6 at Wolverhampton, to 60°·2 at Osborne, 60°·4 in Guernsey, and 60°·7 at Camden Square.

The amount of rain measured during the quarter at the Royal Observatory was 6·29 inches, which is 1·01 inch below the average in the third quarters of 82 years. The amount was 1·85 inch below the average in July, 0·48 inch above in August, and 0·36 inch above in September. At 26 other stations of observation the rainfall during the quarter ranged from 4·72 inches at Ventnor, 5·39 inches at Whitechurch (Oxon), and 5·43 inches at Wolverhampton, to 13·03 inches at Llangammarch Wells, 13·72 inches at Barnstaple, and 16°·20 inches at Stonyhurst.

The duration of bright sunshine recorded in the quarter at the Royal Observatory was 587·0 hours, being 44·4 per cent. of the total hours during which the sun was above the horizon, against a mean proportion of 32·5 per cent. in the twenty preceding third quarters. The duration of bright sunshine exceeded the average by 55 per cent. in July and by 47 per cent. in August, while in September it was 2 per cent. below the average.

Deaths.

The deaths registered last quarter numbered 139,022, and were in the proportion of 17·8 deaths annually per 1000 persons living, the average rate in the ten preceding third quarters having been 16·6. In registration counties the death-rates ranged from 12·2 in Rutlandshire, 12·4 in Somersetshire, 12·6 in Buckinghamshire, in Oxfordshire, and in Cumberland, and 12·7 in Berkshire, to 19·6 in Northumberland, 19·9 in Staffordshire, 21·8 in Lancashire, 22·0 in the East Riding of Yorkshire, and 23·0 in Warwickshire.

The 139,022 deaths registered in England and Wales included 72,628 of males and 66,394 of females, the death-rate among males being 19·1, and that among females 16·5, per 1000 of the estimated populations of the respective sexes. Compared with the averages in the ten preceding third quarters the death-rate of males showed an increase of 1·4, and that of females an increase of 1·0, per 1000 living. Out of equal numbers living, the deaths of males to those of females were as 116 is to 100, against a mean proportion of 114 to 100 in the third quarters of the ten preceding years.

URBAN AND RURAL MORTALITY.—In those parts of England and Wales that are mainly urban* in character, with a population estimated at upwards of twenty-one millions in the middle of 1897, the death-rate last quarter was 19·4 per 1000 living; whilst in the remaining and chiefly rural areas,

* For definition of the terms "urban" and "rural," see Table III. on p. xi.

with a population of nearly ten millions, the rate was 14·3 per 1000. The urban rate was 1·6 per 1000 above, while the rural rate was equal to, the mean rate in the ten preceding third quarters. Out of equal numbers living the deaths last quarter in the urban areas were to those in the rural areas as 136 to 100, the mean proportion in the ten preceding third quarters having been as 124 to 100.

In the *Thirty-three great towns*, of which the aggregate population in the middle of 1897 is estimated at nearly eleven millions, the death-rate was 21·2 per 1000 living, or 3·4 in excess of the death-rate in the whole country. The rates in the several towns ranged from 13·1 in Swansea, 13·2 in Halifax, 13·8 in Huddersfield, and 14·4 in Croydon, to 26·3 in Birmingham, 28·1 in Salford, 28·8 in Liverpool, 28·9 in Wolverhampton, and 33·9 in Preston.

In the *Sixty-seven other large towns*, with an aggregate population estimated at about three and a half millions, the death-rate was 18·0 per 1000 living, or 3·2 per 1000 below the rate in the great towns; whilst in the remainder of England and Wales, excluding these 100 towns, it was 15·4.

Compared with the mean rates in the ten preceding third quarters the mortality of infants under one year of age in England and Wales showed an

increase of 28·3 per cent., that of persons between one year and 60 years of age a decrease of 2·4 per cent., and that of persons aged 60 years and upwards an increase of 0·7 per cent.

ZYMOTIC DISEASES.—The 139,022 deaths from all causes, which were registered last quarter, included—

21,639	that were attributed to diarrhœa,	
2,715	„	measles,
2,049	„	whooping-cough,
1,631	„	diphtheria,
1,343	„	“fever,”
1,097	„	scarlet fever,
and 4	„	small-pox.

Thus, to the above-mentioned zymotic diseases in the aggregate, 30,478 deaths were referred, being in the proportion of 3·89 annually per 1000 of the population, or 1·11 above the mean proportion in the corresponding quarters of the preceding ten years. In proportion to population, the mortality from measles, diphtheria, and diarrhœa was above, while that from each of the other diseases was below, the decennial average. In the thirty-three great towns the aggregate mortality from the above-named zymotic diseases was equal to an annual rate of 5·73 per 1000 of the population, and in the sixty-seven other large towns to a rate of 4·49 per 1000. In the remainder of England and Wales, outside the 100 chief towns, the rate was 2·53 per 1000.

Diarrhœa caused 21,639 deaths in the course of last quarter, which were equal to an annual rate of 2·76 per 1000, or 1·18 above the average mortality for the third quarter in the previous ten years. Among registration districts and sub-districts outside the 100 chief towns diarrhœa was especially fatal in Northfleet, Acton, Ilford, Barking Town, Willenhall, and Boston.

The deaths from *measles* numbered 2715, and corresponded to an annual rate of 0·35 per 1000 of the population, or 0·04 above the decennial average rate for the third quarter of the year. Among registration districts and sub-districts outside the chief towns diphtheria was especially fatal in West Maidstone, Redmarley, St. Mary Shrewsbury, Runcorn, and Eglwysilan.

To "*fever*" 1343 deaths were referred last quarter, giving an annual death-rate of 0·17 per 1000, which is lower by 0·03 than the average rate for the corresponding quarters in the preceding ten years. No death from fever was registered in Huntingdonshire or in Rutlandshire, and only one in Westmorland; the highest rates were 0·26 in Derbyshire, 0·30 in Norfolk, 0·31 in Kent, and 0·34 in the East Riding of Yorkshire. In the thirty-three great towns the rate averaged 0·18 per 1000; the lowest rates were 0·04 in Huddersfield, 0·07 in Croydon, and 0·08 in Leicester; and the highest rates 0·36 in Birkenhead, 0·37 in Portsmouth and in Hull, 0·39 in Derby, 0·48 in Sheffield, and 0·58 in Norwich. In the sixty-seven other large towns the rate averaged 0·13 per 1000, and among these was excessive in Northampton, Colchester, Hanley, Walsall, Barnsley, and Merthyr Tydfil. In the remainder of England and Wales the rate was 0·12 per 1000. In the registration districts and sub-districts outside the chief towns scarlet fever showed excessive fatality in Lavington, Wigston, Ashover, Dronfield, Hayfield, Thornhill, and Filey.

Only 4 fatal cases of *small-pox* were registered last quarter; two of these belonged to London and one to Hull; the other case was of a resident of West Hartlepool, and occurred in South Shields sub-district.

VIOLENT DEATHS.—The deaths in England and Wales which were referred to different forms of violence, whether accidental or otherwise, numbered 4890 last quarter, and were equal to an annual rate of 0·62 per 1000 of the population, which was 0·01 above the average rate in the ten preceding third quarters. The rates in the several counties last quarter ranged from 0·25 in Huntingdonshire, 0·34 in Bedfordshire, and 0·37 in Middlesex, to 0·73 in South Wales, 0·76 in Monmouthshire, 0·77 in Northumberland, 0·83 in Herefordshire, and 0·92 in Rutlandshire. In the thirty-three great towns the mean rate was 0·69 per 1000 living, the rates in the several towns ranging from 0·16 in Swansea, 0·24 in Gateshead, 0·37 in Plymouth, and 0·38 in Halifax, to 0·82 in Birmingham, 0·85 in Salford, 0·93 in Liverpool, and 1·05 in Newcastle-upon-Tyne.

CERTIFICATION OF CAUSES OF DEATH.—Of the 139,022 deaths registered in England and Wales last quarter, the causes of 128,553, or 92·5 per cent., were certified by registered medical practitioners, and the causes of 8057, or 5·8 per cent., by coroners after inquest; whilst the causes of the remaining 2412, or 1·7 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding third quarters having been 2·5 per cent. In registration counties the proportions of uncertified deaths ranged from 0·5 per cent. in Monmouthshire, 0·6 in Wiltshire and in the East Riding of Yorkshire, and 1·0 in Hampshire, to 3·2 in Dorsetshire, 4·0 in North Wales, 4·9 in Westmorland, and 5·6 in Herefordshire. In the thirty-three great towns the mean proportion of uncertified deaths was 1·1 per cent.; but

while no uncertified death was registered in Croydon, in Derby, or in Bolton, the proportions rose to 1·9 in Salford, 2·1 in Birmingham, 2·3 in West Ham and in Sheffield, and 2·7 in Liverpool.

INQUESTS.—Inquests were held in England and Wales concerning 8057, or 5·8 per cent., of the total deaths, the mean proportion in the ten preceding third quarters having been 5·9 per cent. In the thirty-three great towns the proportion of inquest cases was 6·1 per cent., ranging from 2·1 in Preston, 3·2 in Sheffield, and 3·3 in Gateshead, to 6·8 in Derby, 6·9 in Bolton, 8·0 in London and in Bristol, and 8·3 in Newcastle-upon-Tyne.

DEATHS IN PUBLIC INSTITUTIONS.—The total deaths registered in England and Wales include 16,614, or 12·0 per cent., which occurred in workhouses, hospitals, and lunatic asylums, the mean proportion of deaths in these classes of institutions in the ten preceding third quarters having been 11·5 per cent. In the thirty-three great towns the deaths in public institutions formed 17·4 per cent. of the total deaths, the percentages in the several towns ranging from 6·2 in Preston, 6·7 in Burnley, 7·9 in Gateshead, and 8·0 in Bradford, to 16·4 in Manchester, 17·1 in Liverpool, 19·4 in Brighton, 22·0 in Bristol, and 26·2 in London.

LONDON.—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London occurring in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within registration London. The deaths thus computed were equal to an annual rate of 19·4 per 1000 (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London are excluded, the rate is reduced to 18·9 per 1000. Table XII. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many districts of London is seriously affected by the hospitals and other public institutions, the death-rates in each of the forty-three sanitary areas have been added, after distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged.

EDINBURGH, GLASGOW, AND DUBLIN.—The annual death-rate per 1000 living last quarter was 18·4 in Edinburgh, 19·4 in Glasgow, and 24·0 in Dublin, against 19·4 in London.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in thirty Colonial and Foreign cities, with an aggregate population estimated at about twenty and a half millions, corresponded to an annual rate of 23·1 per 1000 persons living.

In twenty-two European cities the mean rate was 20·8 per 1000, against 21·2 in the thirty-three great English towns. In Paris the rate was 16·7, in Berlin it was 20·3, in Vienna it was 19·1, and in New York it was 20·6, against 19·4 in London. Among the other European and American cities the death-rates ranged from 14·5 in Turin, 14·7 in Amsterdam, and 15·1 in Rome, to 25·9 in St. Petersburg, 27·1 in Munich, 27·6 in Breslau, and 40·0 in Moscow. In the Indian cities the rates were 27·2 in Calcutta, 37·2 in Madras, and 51·2 in Bombay. In Alexandria the rate was 51·8, and in Cairo 55·8. *Small-pox* caused 33 deaths in Madras, 25 in Cairo, 24 in St. Petersburg, 12 in Alexandria, and 9 in Bombay. In proportion to population, *measles* was most fatal in Madras, St. Petersburg, and Cairo; *scarlet fever* in St. Petersburg, Moscow, and Prague; *diphtheria* in St. Petersburg, Moscow, Trieste, Cairo, and the American cities; and "*fever*" in the Indian, Russian, and Egyptian cities. The mortality from *diarrhæal diseases* was highest in Bombay, Christiania, Moscow, Berlin, Dresden, Breslau, Munich, Cairo, and Alexandria.

Note.—The numbers of deaths for each of the forty-three sanitary areas of London, upon which the above rates are based, are shown on page 507 of the Registrar-General's Return for the week ending October 9th 1897. The rates for Registration London do not in all cases agree with those in Table vi, page xiii; see also page viii.

The *Registration Districts*, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties. The numerical arrangement 1a to 631 was adopted on 1st July 1891.

arrangement to be so was adopted on July 1st, 1891. The boundaries of the districts are derived from those published in the Census Report of 1891. They do not include space occupied by foreshore or tidal water of rivers and creeks. Numerous changes in the boundaries of sub-districts have taken place since the Census of 1891; in the majority of these cases the new areas have not yet been ascertained.

^a The Registration Sub-districts (2087 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates Workhouse Establishment receiving inmates from other Districts than the one in which it stands; H indicates Hospital or Infirmary; and L Lunatic Asylum.

^b See page 6, note ^a.

^c For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to weeks ending 2nd October 1897.

The POPULATION of the UNITED KINGDOM in the middle of 1897 was estimated at 39,826,806 persons; that of England and Wales at 31,055,355, of Scotland at 4,218,279, and of Ireland at 4,553,172.

In the United Kingdom 282,078 *births* and 170,069 *deaths* were registered in the three months ending 31st December 1897. The natural increase of population was, therefore, 112,009. The number of persons married in the quarter ending 30th September 1897 was 157,288.

The birth-rate in the United Kingdom in the *fourth* quarter of 1897 was 28·1, and the death-rate 16·9, per 1000. The marriage-rate in the *third* quarter of 1897 was 15·7 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Emigration.

It appears from returns issued by the Board of Trade that 45,791 emigrants embarked during last quarter, from the various ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 1472 emigrants whose nationality was not ascertained, the emigrants who were natives of the United Kingdom numbered 32,370, of whom 23,526 were English, 3591 Scotch, and 5253 Irish, whilst 13,421 others were of foreign origin. The proportions of emigrants belonging to the several portions of the United Kingdom, per million of the respective estimated populations, were 758 belonging to England, 851 belonging to Scotland, and 1154 belonging to Ireland. Compared with the averages in the three preceding fourth quarters, the proportion of English emigrants showed a decrease of 11·6 per cent., that of Scotch emigrants an increase of 1·1 per cent., and that of Irish emigrants a decrease of 18·3 per cent.

Meteorology.

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 74–82.

The mean reading of the barometer was 29·930 inches, being ·181 inch above the average reading in the fourth quarters of 56 years; the mean reading was ·292 inch above the average in October, ·266 inch above in November, and ·014 inch below in December. The mean temperature of the air was 46°·0, or 2°·4 above the average in the fourth quarters of 126 years; it was above the average in each month of the quarter, the excess being 1°·6 in October, 3°·2 in November, and 2°·4 in December. The weather in the first two months of the quarter was generally dry but dull; the temperature was below the average until the 13th October, but after that date it was in excess until the end of November. In December the temperature was below the average from the 1st to the 5th, and from the 21st to the 26th, but was above during the other parts of the month. South-westerly gales were experienced at the end of November, and at the beginning, middle, and end of December. At 27 other stations of observation the mean temperature of the air during the quarter ranged from 43°·4 at Wolverhampton and Halifax, 44°·2 at Barnet, and 44°·4 at Whitchurch (Oxon.) and Nottingham, to 49°·0 at Llandudno, 49°·5 at Ventnor, 50°·0 at Truro, and 51°·5 in Guernsey.

The amount of rain measured during the quarter at the Royal Observatory was 3·69 ins., which is 3·43 ins. below the average in the fourth quarters of 82 years. The amount was 2·33 ins. below the average in October, 1·26 ins. below in November, and ·16 in. above in December. At 27 other stations of observation the rainfall during the quarter ranged from 3·14 ins. at Cambridge, 3·40 ins. at Royston, 3·65 ins. at Lowestoft, and 3·80 ins. at Camden Square, to 12·92 ins. at Truro, 13·24 ins. at Stonyhurst, and 13·85 ins. at Llangammarch Wells.

The duration of bright sunshine recorded in the quarter at the Royal Observatory was 203·7 hours, being 24·4 per cent. of the total hours during which the sun was above the horizon, against a mean proportion of 16·5 per cent. in the twenty preceding fourth quarters. The duration of bright sunshine exceeded the average by 47 per cent. in October and by 162 per cent. in December, while in November it was 2 per cent. below the average.

CERTIFICATION OF CAUSES OF DEATH.—Of the 132,696 deaths registered in England and Wales last quarter, the causes of 121,314, or 91·4 per cent., were certified by registered medical practitioners, and the causes of 8624, or 6·5 per cent., by coroners after inquest; whilst the causes of the remaining 2758,

or 2·1 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding fourth quarters having been 2·7 per cent. In registration counties the proportions of uncertified deaths ranged from 0·7 per cent. in London and in Monmouthshire, and 0·9 in Wiltshire and in Somersetshire, to 3·3 in Essex, 3·4 in Derbyshire, 3·6 in Herefordshire, and 4·5 in Westmorland and in North Wales. In the thirty-three great towns the mean proportion of uncertified deaths was 1·3 per cent.; but while no uncertified death was registered in Croydon, in Derby, in Bolton, or in Oldham, the proportions rose to 3·2 in Leicester, 3·5 in Huddersfield, 3·8 in Liverpool, and 4·8 in Preston.

INQUESTS.—Inquests were held in England and Wales concerning 8624, or 6·5 per cent., of the total deaths, the mean proportion in the ten preceding fourth quarters having been 6·0 per cent. In the thirty-three great towns the proportion of inquest cases was 7·9 per cent., ranging from 2·9 in Preston, 4·2 in Huddersfield, and 4·5 in Sheffield, to 8·9 in Leeds, 9·0 in London and in Bolton, 10·5 in Newcastle-upon-Tyne, and 11·1 in Derby.

DEATHS IN PUBLIC INSTITUTIONS.—The total deaths registered in England and Wales include 18,033, or 13·6 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in these classes of institutions in the ten preceding fourth quarters having been 11·8 per cent. In the thirty-three great towns the deaths in public institutions formed 21·1 per cent. of the total deaths, the percentages in the several towns ranging from 7·0 in Blackburn, 7·2 in Gateshead, 7·3 in Burnley, and 7·5 in Preston, to 21·3 in Brighton, 23·8 in Liverpool, 24·3 in Manchester, and 28·5 in London.

LONDON.—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London occurring in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within registration London. The deaths thus computed were equal to an annual rate of 19·4 per 1000 from all causes and of 2·72 from the principal zymotic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London are excluded, these rates are reduced to 19·0 and 2·70 per 1000 respectively. Table VIII. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many districts of London is seriously affected by the hospitals and other public institutions, the death-rates in the forty-three sanitary areas, corrected by the distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged, are also shown.

EDINBURGH, GLASGOW, AND DUBLIN.—The annual death-rate per 1000 living last quarter was 19·4 in Edinburgh, 20·6 in Glasgow, and 24·6 in Dublin, against 19·4 in London.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-seven Colonial and Foreign cities, with an aggregate population estimated at about nineteen and a half millions, corresponded to an annual rate of 20·4 per 1000 persons living.

In twenty-one European cities the mean rate was 19·1 per 1000, against 19·0 in the thirty-three great English towns. In Paris the rate was 18·5, in Berlin it was 16·2, in Vienna it was 18·8, and in New York it was 17·6,

against 19·4 in London. Among other European and American cities the death-rates ranged from 14·1 in Christiania, 14·2 in Amsterdam and in Hamburg, and 14·6 in Turin, to 23·3 in Munich, 24·0 in Trieste, 26·6 in St. Petersburg, and 30·5 in Moscow. Among Indian cities the rates were 34·0 in Calcutta, 37·4 in Madras, and 47·7 in Bombay. *Small-pox* caused 43 deaths in St. Petersburg, 5 in Moscow, and 5 in Madras. In proportion to population, *measles* was most fatal in Madras, St. Petersburg, and Vienna; *scarlet fever* in St. Petersburg, Moscow, and Prague; *diphtheria* in St. Petersburg, Moscow, New York, Brooklyn, and Philadelphia; and "*fever*" in the Indian cities and in St. Petersburg and Moscow. The mortality from *diarrhœal diseases* was highest in the Indian cities, as well as in St. Petersburg, Moscow, Breslau, Munich, Vienna, Buda-Pesth, and in Rome.

The Year 1897.

According to the quarterly returns furnished by local registrars, 921,104 births and 541,426 deaths were registered in England and Wales during the year 1897. The natural increase of population, by excess of births over deaths, was therefore 379,678, the average annual increase in the preceding five years having been 363,383.

The returns issued by the Board of Trade show that 213,450 emigrants embarked during the year, from the various ports in the United Kingdom at which emigration officers are stationed, for places beyond Europe. Distributing proportionally 4,182 emigrants whose nationality was not ascertained, the emigrants who were natives of the United Kingdom numbered 150,022, of whom 97,650 were English, 16,473 Scotch, and 35,899 Irish, whilst 63,428 others were of foreign origin. The emigrants from each division of the United Kingdom showed a decrease from the number in the previous year, the decrease in the English emigrants being 7·7 per cent., in the Scotch emigrants 4·0 per cent., and in the Irish emigrants 15·3 per cent.

The birth-rate in England and Wales in 1897 was 29·7 per 1000 of the population, which is equal to the rate in 1896, and lower than that in any other year on record excepting 1894; compared with the average in the ten years 1887-96, the birth-rate in 1897 shows a decrease of 1·0 per 1000.

The death-rate in 1897 was 17·4 per 1000, which is lower than the rate in any previous year, excepting 1894 and 1896; compared with the average in the ten years 1887-96 the death-rate in 1897 shows a decrease of 1·2 per 1000.

The 541,426 deaths registered in 1897 included 143,814 of infants under one year of age, 245,568 of persons aged between one year and 60 years, and 152,064 of persons aged 60 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 156, which was 8 per 1000 above the mean proportion in the ten years 1887-96. The death-rate among persons aged between one year and 60 years was 8·8 per 1000, and that among persons aged 60 years and upwards was 66·2 per 1000, of the estimated populations at these respective groups of ages.

The total deaths registered included 26,857 from diarrhœa, 12,456 from measles, 10,887 from whooping-cough, 7461 from diphtheria, 4873 from "*fever*," 4492 from scarlet fever, and 25 from small-pox. Thus 67,051 deaths were attributed to these zymotic diseases, corresponding to a rate of 2·15 per 1000 living, against 2·17 and 2·21 respectively in the preceding two years.

To different forms of violence 19,284 deaths were referred, being in the proportion of 0·62 per 1000 of the population, against 0·68 and 0·64 in the preceding two years.

The 541,426 deaths included 33,999 cases, or 6·3 per cent., in which inquests were held ; and 11,071 cases, or 2·0 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

The foregoing statistics for the year 1897, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Sixtieth Annual Report, which is now in course of preparation.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties. The numerical arrangement 1a to 631 was adopted on 1st July 1891.

^a These areas, revised by the Ordnance Survey Department, are derived from those published in the Census Report of 1891. They do not include space occupied by foreshore or tidal water of rivers and creeks. Numerous changes in the boundaries of sub-districts have taken place since the Census of 1891; in the majority of these cases the new areas have not yet been ascertained.

^a The Registration Sub-districts (2082 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates Workhouse Establishment receiving inmates from other Districts than the one in which it stands; H indicates Hospital or Infirmary; and L Lunatic Asylum.

^b See page 6, note ^a.

^c See page 2, note ^d.

^d For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 1st January 1898.

* 10, 2, 3, 4, 5.—On 1st October 1897 the boundaries of the four Sub-districts comprising Hackney civil parish were re-arranged and re-named; 2 North Hackney, 3 Central Hackney, 4 South West Hackney, 5 South East Hackney.

METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING
DECEMBER 31st, 1897.*By* JAMES GLAISHER, ESQ., F.R.S., &c.

The weather in October was fine, but dull, with very little sunshine. The mean high day temperature was $1^{\circ}2$, and the mean low night temperature $1^{\circ}2$ above their averages. The mean daily temperature of the air was below its average till the 13th, being particularly so on the 7th, when it was as much as $8^{\circ}9$ below; and above its average from the 14th to the 31st, being as much as $9^{\circ}7$; $9^{\circ}5$, $11^{\circ}0$ and $9^{\circ}2$ in excess on the 15th, 16th, 17th and 18th respectively. The atmospheric pressure was above its average from the 1st to the 12th; being particularly so on the 4th, 5th, 6th and 7th, the mean daily excess for these 4 days was 0.55 inch; below its average from the 13th to the 16th; and above again from the 17th to the 31st, being as much as 0.63 inch, 0.69 inch, and 0.53 inch in excess on the 20th, 21st and 22nd respectively. The fall of rain was small and greatly below its average at all stations. The fall in the month at Greenwich was 0.48 inch; and there is only one instance of so small a fall in the month of October back to the year 1815, viz., in 1834, when it was 0.40 inch. Fog was prevalent on several days towards the end of the month.

The weather in November was dry, dull and mild. The mean high day temperature was $1^{\circ}7$, and the mean low night temperature $2^{\circ}6$ above their averages. The mean daily temperature of the air was generally above its average throughout the month, being as much as $12^{\circ}7$, $12^{\circ}3$ and $10^{\circ}5$ in excess on the 13th, 14th and 17th respectively. The atmospheric pressure was below its average from the 12th to the 14th, and from the 28th to the 30th, and above on all other days, being particularly so on the 20th, 21st, and 22nd; the mean daily excess for these three days was 0.80 inch. The fall of rain was small and below its average at all stations. The total fall in the months of October and November at Greenwich was 1.55 inch, and there is no instance of so small a fall for the months of October and November back to the year 1815, the nearest approach being 1.70 inch in both 1834 and 1879. Fog was prevalent towards the middle and end of the month. South-westerly gales were experienced on the 27th, 28th and 29th; occurring on the 29th at about the time of high water, with a change of wind, causing the water at the mouth of the Thames to be raised about 7 or 8 feet higher than usual; in consequence, many places on both sides of the Thames were flooded, the piers at Sheerness, Broadstairs, and Margate, were seriously injured, and baths at Margate were wrecked. In London the tide was from 3 to 4 feet higher than usual, at Woolwich the Arsenal was flooded. On the East Coast the morning tide of the 29th rose several feet above the calculated heights, many places were seriously flooded, and much damage was done along the coast.

The weather in December, with the exception of the 1st to the 5th and from the 21st to the 26th, was mild, dull and wet. The mean high day temperature was $1^{\circ}8$, and the mean low night temperature $1^{\circ}1$ above their averages. The mean daily temperature of the air was below its average from the 1st to the 5th, and from the 21st to the 26th, being as much as $9^{\circ}4$ below on the 4th; it was above from the 6th to the 20th, and from the 27th to the 31st, being particularly so on the 16th, 17th, 27th, 29th and 30th, when it was as much as $13^{\circ}4$, $9^{\circ}6$, $9^{\circ}1$, $11^{\circ}1$, and $9^{\circ}0$ respectively above. The atmospheric pressure was above its average from the 2nd to the 6th, and from the 17th to the 26th, and below on all other days, being as much as 0.71 inch, 0.78 inch and 0.76 inch below on the 10th, 30th and 31st respectively. The fall of rain was above its average at all stations. South-westerly gales were experienced at the beginning, in the middle, and at the end of the month. A thunderstorm occurred in the south-eastern part of England, accompanied by a gale of wind and heavy hail storm during the night common to the 14th and 15th. Fog was prevalent on several days during the month.
